

Connection details to a SQL Server database to work on:

Host Name:

Host Name	vr-public-sqlserver.database.windows.net
Database	technical_test
Username	candidate
Password	FlashHorizontalWarVarious6

- 1) Create the SQL statement to retrieve all the animals and their respective owners, where the animal has been treated with a product having an SKU of 'Heart'. Ensure the animals are living, and the client is active.
- 2) Propose any database alterations that might make your query perform better as the database grows.
